This guides shows you how to install a demo instance. When you are ready to move to production, take some time to read the [Install the Server](#) documentation.

On this page

[Installing from a zip file](#)

Using Docker

Installing from a zip file

1. [Download](#) the SonarQube Community Edition.
2. As a **non-root user**, unzip it, let's say in `C:\sonarqube` or `/opt/sonarqube`.
3. As a **non-root user**, start the SonarQube Server:

```
# On Windows, execute:
C:\sonarqube\bin\windows-x86-xx\StartSonar.bat

# On other operating systems, as a non-root user execute:
/opt/sonarqube/bin/[OS]/sonar.sh console
```

 If your instance fails to start, check your [logs](#) to find the cause.

4. Log in to <http://localhost:9000> with System Administrator credentials (login=admin, password=admin).
5. Click the **Create new project** button to analyze your first project.

Images of the Community, Developer, and Enterprise Editions are available on [Docker Hub](#).

1. Start the server by running:

```
$ docker run -d --name sonarqube -p 9000:9000 <image_name>
```

2. Log in to <http://localhost:9000> with System Administrator credentials (login=admin, password=admin).

3. Click the **Create new project** button to analyze your first project.
